

Sogefi's Cabin Air Filter won the "Automotive component of the year 2019"

Sogefi has received the prestigious: "**Automotive component of the year 2019**" award, in Russia.

The competition consisted in comparing some indicators and several characteristics established by the Scientific Expert Council of the Award.

This year the tests were focused on the **cabin air filter for the TOYOTA COROLLA E150** (2006-2010), checking the following parameters:

- the filter capacity (in accordance with the TP TC 018/2011 Appendix 10 p.78);
- the aerodynamic resistance;
- the average coefficient of dust;
- the final resistance of the air cleaner.

The committee of the "Automotive component of the year 2019" conducted comparative examinations of the products in the testing laboratories of FSUE "NAMI", Research Institute "Avtoelectronics", CJSC Avtopribor, holding Certification Group.

With this award Sogefi is recognized as **the best performing Cabin air filter manufacturer in the Russian Aftermarket field.**

Sogefi offers three types of cabin air filters to the aftermarket that protect against external pollution as well as bad smells, and fine particles: **Pollen, Activated Carbon Filters and Cabin3Tech+.**

The pollen cabin air filter stops particles bigger than 40 microns, including dust, pollen, bacteria, braking residues, mould, sulphur oxides and exhaust gases.

The activated carbon filter stops particles as well as odors thanks to Sogefi's high tech design that consists of three filtration layers: one active carbon layer between two layers of non-woven fibres. In addition, it reduces the concentration of noxious gases inside the car that could cause headaches, irritation and coughing.

Cabin3Tech+ combines the best in cabin filtration technology. It efficiently filters large particles (like a pollen filter), neutralizes odours and hazardous fumes in the air (as an activated carbon filter) and **stops up to 98.8% of fine particles as small as 2.5 microns** thanks to a third layer with electrostatic properties.

Sogefi is one of **Europe's leading vehicle filter suppliers** addressing the needs of its partners thanks to its OE-DNA across **oil, engine air, fuel and cabin air filters** with an all makes coverage for all major **European, American and Asian carmakers.**

Its expertise as **OE supplier** can be appreciated through the quality of its **aftermarket parts** and **extensive electronic catalogues** available.

Sogefi is offering a **broad product range to Russian customers** through its **warehouse based in the Moscow area**, providing shorter shipping times as well as maximum logistical efficiency and product availability.
